

ECLIPSE

The nonstick reinforced to outlast other reinforced nonsticks!

Eclipse is a special internally reinforced coating system that sets a new standard for resistance to abrasion and wear:

- It has three coats of nonstick, all of which are reinforced (see diagram).
- The reinforcing materials are virtually as hard as diamonds.
- On standard abrasion tests, the best conventional nonsticks reach 20,000 cycles. Most reinforced nonsticks reach 400,000. But new Eclipse reaches 700,000 (with superb release)!
