

HALO

**The Whitford nonstick that
helps cook quickly and evenly**

The new nonstick that actually helps you cook more quickly and evenly!

HALO is a totally new and different kind of nonstick coating system for top-end cookware. While it has unsurpassed resistance to wear, and releases food easily, it also:

- Contains a unique formula of special additives that absorb heat from the stovetop more quickly and distribute it across the surface of the pot or pan more evenly.
- This transfers the heat more rapidly into the food, reducing cooking time.
- HALO's amazing heat distribution also helps eliminate "hot spots".
- It not only cooks better, faster, it also uses less energy!

Whitford

Makers of the world's largest, most complete line of nonstick coatings
