

Whitford's remarkable nonstick doubly reinforced to outlast all conventional nonsticks

Whitford launched a breakthrough several years ago: Quantum2. Quantum2 was — and is — remarkably tough. In fact, tests showed it to be at least twice as tough as its predecessor, Quantum.

Quantum, Whitford's first internally reinforced nonstick system, was developed to outlast all conventional nonstick coatings (even the most dramatically improved versions). That's because Quantum was reinforced internally with a diverse blend of space-age inorganic particles.

Then Whitford went several steps further with Quantum2. What's the difference?

- The network of reinforcing elements was increased significantly.

- Even the fluoropolymers were altered to create a synergistic effect with the other elements in the coating to achieve maximum durability.
- Yet the nonstick surface is smoother, with even higher eye-catching gloss than Quantum (which has higher gloss than conventional nonsticks).

The result: the consumer can enjoy the benefits of an outstanding nonstick — without the usual worry of wear.

For more information on Quantum2, contact your Whitford representative or Whitford Corporation, 47 Park Avenue, Elverson, PA 19520. Email: sales@whitfordww.com. Website: whitfordww.com.

Whitford

Makers of the world's largest, most complete line of fluoropolymer coatings
