Whitford names RGF Enterprises a member of its “Recommended Coater” program

September 2014, Corona, CA. Whitford Corporation, makers of the world's largest, most complete line of fluoropolymer coatings, has announced that RGF Enterprises is the newest member of its WRC (Whitford Recommended Coater) Program.

For more than 30 years, RGF has provided custom high-quality finishes for the aircraft, military, medical, electronics and offshore oil industries. They have taken extensive measures to ensure quality and process control, including specification testing for consistently compliant results. RGF's lab facilities include salt-spray, humidity and other wear and weather testing, as well as high-temperature and large-scale ovens to accommodate almost any size application. RGF has been using Whitford products for the past 30 years with great success.

Recognizing RGF's capacity, Whitford has named them as a member of its “Recommended Coater” program. Criteria to qualify for this program include having a strict quality-control system in place, solid knowledge of Whitford coatings and how to apply them, and attendance at one of Whitford's bi-annual training sessions.

Says Eric Fisher, Vice President of RGF, “We appreciate the professional and priceless business relationship we have and look forward to many future endeavors with Whitford.”
